

Psi energy and SAP's

<https://odysee.com/@psinergy:f/trim.D5E8F851-4FF8-483C-B72A-7590D29617E2:4>

Sabrina Wallace is the author of this odysee post: “This is warfare. They have weaponized the biofield and chakras. The sooner you get educated, the better off you are going to be. That is all there is to it. What I showed today at the beginning is your ‘public service announcement so you know who is lying to you.’ and how they are lying. Judge accordingly—it’s just math.”
Mark 5: 36. Amen.

(My responses will be in parenthesis. She is correct to say that it is just math, but let’s add one caveat, Ecclesiastes 3:11 and Hebrews 11:3 speak of the Unified Field theory from a Christian perspective. Calculus is used to integrate infinities into our practical world of light and matter, but a single equation remains elusive. I propose that ‘that things which appear’ relates to light, and that ‘things which are seen’ relates to matter. The infinite God is the single equation that supports the Unified Field Theory.)

This is a very technical presentation that requires interpretation for those not conversant with computer systems engineering and AI. My intent is to direct a large body of reviewers to this presentation. I will introduce this with information that I have developed independently. I will make notes as Sabrina Wallace (aka Sabrina D. Davis) progresses to support or disagree with her premise that this is a technology that has been around for several generations. Since Ed Komarek has common interests to my own, he will be my ‘target’ audience. Our friend Beverly, also, has unusual abilities where her brain has essentially been required to rewire itself. For this reason she processes information very differently, and presents a unique challenge. She is my secondary ‘target’ audience.

Ed fervently believes in UAP’s or UFO’s as they used to be known. He and Beverly both believe in reincarnation in an effort make sense of mysteries far beyond our normal reasoning ability. Both are high functioning adults, blessed with very gifted parents. Ed, like myself, has traveled in India and immersed himself in that culture. If a technical or esoteric term is unfamiliar, look it up. For example, aura’s are discredited in the west, but commonly accepted in Asia. Any preconceived bias must be reviewed, but all of us agree that the scientific method is valid. Unless the data can be replicated independently, it should be questioned.

I came to this information by a long process that would distract from the purpose of this review. Please source the following scientists as part of a body of research involving nanotechnology and AI: Ido Bachelet, Beni Hochner, Charles Lieber, Ralph Baric, Albert Bourla, and Andreas Noack. Each of these gentlemen has specialized in a compartmentalized approach to replacing humans with transhuman, augmented cyberhumans linked to the Internet or whatever future version of this will exist.* It is a great war in which those of us professing a faith in the Divine must contend and maintain our human stewardship of the Planet Earth. For those of my friends such as Richard who worked at Oak Ridge as a programmer with degrees in physics and electrical engineering, this link will provide information beyond my ability to understand. Essentially, math underlies much of our modern world. Some are better at doing this than others and can think mathematically. Here is a bit of solace for those of us that like math, but are not proficient. A Fourier transform uses the calculus of infinities to make sense of frequencies. That is essentially what the brain does with your intuition. Because a large part of Beverly’s brain was destroyed by lightning at a young age, I suspect that like men, she uses a portion of the peripheral part of her brain to make sense of the world around us. Whether her biogenic magnetite works as suggested by Joseph Kirschvink at Caltech, remains to be determined.

The fundamental challenge that I present to both Ed and Beverly is that reincarnation is a lie promoted by those who wish to control our behavior and prevent us from ascending to the next level. Instead of UAP's, I believe that Special Access Programs, known as SAP's have been created to divert billions of dollars into these nanotechnologies used to control our global population.

The Review: Sabrina's purpose is to prepare us for electromagnetic drone warfare. I will include my comments in parenthesis from hereon out. (Faraday bags provide limited protection from surveillance. The iron as the central atom in blood in the human brain provides the same advantage. MySQIF or Tor provide another layer of Internet protection, but nothing provides complete protection. That is the nature of the battle that we are engaged in.) She establishes her genetic family heritage through Bernard Heinrich Scherer. Her father was Stephen Garland Davis, her mother was Lynn Jean Scherer. She is a modified child through the Meninger Foundation for human augmentation. She has body/machine interfaces implanted as a child through direction of her parents. She had no choice in the matter. Her great uncle was involved with Fort Meade and the NSA. (Fort Meade developed the black ops remote viewing program and Douglas Gabriel speaks to the NSA programs facing us.) Born in 1979 (age 44), she was told nothing of her heritage with implants. She could see auras at will. Sabrina's parents were four levels above normal law enforcement – Secret Elite Service. (This is different from Senior Executive Service or like CID, the lesser known version is Counter Intelligence Division.) She worked professionally with HSA, High Speed Access. This is the back end of Space Force. (Space Force is a military branch of a nation's armed forces that conducts military operations in outer space and space warfare. The world's first space force was the Russian Space Forces, established in 1992 as an independent military service.) She worked with the primary Aerospace industries like L3Harris. She was a network engineer for PRISM and NSA data gathering organizations. Turner Communications and Cisco were major clients. She was listed as permanently disabled for being depressed in 2004. This presentation was done in 2022.

She was tested for synthetic telepathy. (This is different from Beverly who inherited telepathy – she might dispute this, calling it channeling, or my own tests at the Rhine Institute of Parapsychology, that suggested I was resistant to external psychic manipulation. This was later confirmed by two generations of remote viewers from Fort Meade that cautioned each other that I was highly psychic and could overhear their conversations, which I did in this case, whether they knew it or not.) She states that the heart of surveillance was the human biome. Her parents silenced her for ten years, saying chakras and aura's, who cares. (In the west, this is further stigmatized as occult, so religious suppression continues this agenda of silence.) Being able to feel radar and other electromagnetic signals is natural for Sabrina. The US Marine Corp is the only branch of our military that trains for this ability as part of situational awareness.

This electromagnetic technology was being developed in 1953. It was being used in drones and tanks managed by remote control. (I viewed papers by Robert C. Beck of the US Office of Naval Surface Weaponry that went public with his information in the formative years of this psychoactive technology. Much of that can still be found at ELFis.net under a bibliography about Psychoactive Mood Modification with his colleague Eldon A. Byrd. Specifically see the papers by Ludwig on crystallization of lipid nanoparticles used to act as receivers.) She speaks of the Nano Internet of Things being used at the industrial level. Machine interface systems were first developed around 1950. Where she lives in West Virginia in a town of 200 people, they have 6G. (In other words, they are a controlled test sample.)

She is able to do math in binary. (Look this one up. Basically it just translates numbers into ones and twos which is the machine language of computer coding.) She begins to explain PAN, which is similar to LAN, but used for human interfaces. PAN means personal area network. LAN means Local Area Network. *Project Salus* is an AI tool that ingests and displays critical supply chain data. Neuralink and Sychron are currently in development to enhance AI augmentation. There is a team

called JAIC – Joint Artificial Intelligence Commission. Hot conduits using Smart sensors, cellphones, etc. are being integrated into AI. (Here is where the concept of doppelganger becomes increasingly important. I first learned of this through a Bible Smuggler, Brother Andrew. It is possible to create holographic doubles to disperse surveillance efforts.) The new 6G technology will use human bodies to replace humans with Artificial Intelligence.

WBAN Wireless Body Area Network has existed since 2005. 802.15.6** Inflammation occurs in the body by pulling minerals to activate this process. (Hydration and mineral supplements will reduce effects, but nutrient dense foods are the key requirement to supply trace minerals no longer in our food supply. The transducers that she refers to are designed to augment existing biochemical systems in the body. This is why what are considered extreme behaviors in spiritual disciplines will be required as increasingly commonplace protections. That means maintaining a quiet mind, exercising non-judgment and forgiveness, staying in the now rather than constantly remembering past events or predicting future event probabilities.)

She refers to synthetic telepathy wearables to increase telepathy. (Observe carefully those with bluetooth devices plugged into their ears.) Structured Query Language Hive – SQL Hive – is the back end of Microsoft, Apache, and Wordpress. Space Force, Signals Intelligence and NSA have something called brain-to-brain-interface. It is frequency driven peer to peer communication. (When the Fort Meade remote viewing program was shut down, it was not terminated; it just morphed into a more sophisticated and reliable mechanism than the original 5 men teams.) Dirtbox and Stingray software: Both the DEA and the Marshals possess airplanes outfitted with so-called stingrays or dirtboxes - powerful technologies capable of tracking mobile phones or, depending upon how they're configured, collecting data and communications from mobile phones in bulk. These can also be packaged in drones or more remote surveillance hardware. (I have observed that my current version of Teel Technology Faraday bags no longer work for 5G systems, but do provide a layer of shielding.)

Wireless tissue engineering and wireless total piezoelectric control: This is used for neural behavioral modulation to initiate incremental brain damage for control. Another term is neural mitigation. (This is the current advance from Bob Beck's Psychoactive frequencies for Mood Modification that still exists in the open source record. The original test subjects were conditioned to accept psychic and UAP phenomena. Once that threshold of credibility was breached, the placebo effect in reverse could induce behavioral modification. This is why Beverly surmised that Ed was biologically damaged. Perhaps it was his use of LSD or encounters with powerful human psychic transmitters such as Sai Baba, but equally likely it is his inability to shield as exemplified by his need to seek remote locations for his normal activities. Crowds quickly induce disorientation, and as the saying goes if you don't exercise it, you lose it. Shielding requires active exercise, just as the Biblical saying where 'sin abounds grace will abound that much more.' The principal difference between an adept successful at shielding and a Christian lies in the ability to lie dormant until needed, versus having to actively protect oneself.)

Sabrina suggests that drone warfare is here and becoming more of a reality. (It is a time of testing for believers and claiming a simple faith, without exercising awareness, is comparable to one of my favorite novels, Beau Geste. In this classic, Beau is the last remaining legionnaire in a battle. He props the dead soldiers in the parapets with their guns, and runs around firing them, until help arrives. That will be the function of a dead Christian, one who still lives and breathes, but is spiritually inactive.) She briefly mentions that police departments are finished. (This is worth expanding as we see the apparent collapse of law enforcement in urban areas where Black Lives Matter and AntiFa have undue influence. Social chaos, just means that the thin blue line just got thinner. Pray for your local law enforcement to the degree that they are not compromised by Federal technology sharing and funding.) She mentions nano-antenna's for WBAN -whole body area network. (The reason I referenced Ido Bachelet earlier is that he represents a body of scientists introducing a third strand of

DNA to act as an antenna for external signals. Beni Hochner is doing a similar thing with nanobots patterned after the biology of octopi.)

She mentions satellite inclusive: (Currently Starlink is a slower version of 5G and 6G, but as the technology improves upgrades will allow sufficient bandwidth to integrate with human biology globally, no matter where you are located physically.) The technical term for this project was MQ-9 tethered to a ground action known as Project Maven. Cognitive radar shows how a person thinks in real time. (Learning the art of invisibility has become a matter of serious consequences if not practiced.)

Lethal autonomous weapon systems: Sabrina suggests that this is what we are facing. (How can we receive this information without becoming clinically depressed or entering a state of fear that weakens our immune system? Faith.) She is an electronic warfare survivor and there are others seeking to help us resist. She teaches offensive and defensive biofield practice. For those folks of a lesser intellectual capacity, remember that ‘God has chosen the foolish things of the world to confound the wise and the weak things of the world to confound the mighty.’ Practice makes perfect. Seek out those above your level or below and learn to integrate with them through non-judgment. This is a separate concept from co-dependence.

She introduces a new term ‘tissue engineering transmogrification’. mRNA plays a part in this. (That is why packaging with graphene hydroxide had multiple value in the vaccines. Retroviruses are fragile, replicate themselves into oblivion, or if genetically engineered beyond gain-of-function, they can alter DNA.) She says get right with God and prayerful people, (but at the same time another video shows her cursing like a sailor. That’s why she says get right with God. Humans, including Sabrina, for all her good qualities, is a flawed individual.) Then Practice. This is inclusive in that whatever the ‘diet’ you choose, it can represent love. (For one individual, it is the Great Turtle mother. For another, like Ed it is Bunny and Lizzie, the lizard.)

* “Networks of nanometer-scale machines offer exciting potential applications in medicine, industry, environmental protection and defense, but until now there’s been one very small problem: the limited capability of nanoscale antennas fabricated from traditional metallic components. With antennas made from conventional materials like copper, communication between low-power nanomachines would be virtually impossible. But by taking advantage of the unique electronic properties of the material known as graphene, researchers now believe they’re on track to connect devices powered by small amounts of scavenged energy.” Cited from a Georgia Tech professor.

** The **IEEE 802.15.6 standard** is the latest international standard for Wireless Body Area Network (WBAN). WBAN supports a variety of real-time health monitoring and consumer electronics applications. The latest international standard for WBAN is the **IEEE 802.15.6 standard** which aims to provide an international standard for low power, short range, and extremely reliable wireless communication within the surrounding area of the human body, supporting a vast range of data rates for different applications. Short-range, wireless communications in the vicinity of, or inside, a human body (but not limited to humans) are specified in this standard. It uses existing industrial scientific medical (ISM) bands as well as frequency bands approved by national medical and/or regulatory authorities. Support for quality of service (QoS), extremely low power, and data rates up to 10 Mbps is required while simultaneously complying with strict non-interference guidelines where needed. This standard considers effects on portable antennas due to the presence of a person (varying with male, female, skinny, heavy, etc.), radiation pattern shaping to minimize the specific absorption rate (SAR) into the body, and changes in characteristics as a result of the user motions. (The difference between this and earlier versions is the more complete use of the human body.)

IEEE Std 802.15.3d-2017 defines an alternative physical layer (PHY) at the lower THz frequency range between 252 GHz and 325 GHz for switched point-to-point links is defined in this amendment. Two PHY modes are defined that enable data rates of up to 100 Gb/s using eight different bandwidths between 2.16 GHz and 69.12 GHz. (My data suggests that extremely low frequency transmissions in the 0-14 Hertz range are biologically active. In order for M2M transmission to reach cellular levels, modulation must be induced purposely. There are a number of ways to fool the brain and the body to do this naturally without implants, but introduction of graphene hydroxide and self assembling receivers is the preferred mechanism. Ido Bachelet is working with introduction of receivers as a third strand of DNA. This would complement the latest quantum computers that use DNA move at the speed of the old commodore computers. Increasing speed will naturally follow more compatible interfaces. Observe frequent cellphone users when they communicate with speech, and

their rate of speech appears unnaturally fast. This seems to be the result of ongoing training of human consciousness with AI systems. Entrainment using a specific frequency can be summated using the body's natural skin dielectric constant. This will cause measurable biological effects in the body.)
