

“USAID is the largest financial fraud in history.” Incorrect! *Not even close!*

GREATEST GOV'T FRAUDS IN HISTORY

As frauds go, **USAID** is not the largest fraud in history. USAID was formed on Nov. 3, 1961 and has received over **\$330 billion** in U.S. taxpayer dollars.

USAID is outrageous, of course! But citizens should know that another fraud dwarfs the USAID criminality by more than 62 times.

The **theft of social networking** from inventor Michael McKibben and his company Leader Technologies in Columbus, Ohio has a current market capitalization above **\$20.5 trillion**.^{1 2 3}

Backstory

The value of the theft of social networking since its invention by Michael McKibben and his company Leader Technologies in Columbus, Ohio in 2000 is estimated to be well over \$20.5 trillion.

Rising internet usage is expected to propel the growth of the social media market in the coming years even further. The Internet is any type of electronic communication network that links computer networks and computers within organizations all over the world. It is a broad term that refers to all of the actions that individuals take when interacting with the Internet.

³ Read [Leader Technologies' THE FREE PRESS FUND](#) proposal to fix this immorality on which our economy now depends.

In 1995, Michael McKibben rebuilt AT&T's AccessPlus 3.0 email system, using Bell Labs as his testers. He was one of the first ten websites on AT&T WorldNet Service.

Starting in 1997, in a highly secret engineering effort, Michael and his company Leader Technologies, and their world-class engineers, began cracking the stumbling block of Internet scalability that was frustrating IBM, AT&T, Sun, HP, Lotus, Novell, Marconi, Five Eyes, CIA, FBI, NSA, MI6, MI5, GCHQ, SERCO (UK), QinetiQ (UK), In-Q-Tel, Pilgrims Society, TheCityofLondon, DARPA from fully exploiting the potential of large-scale Internet collaboration.

In 2000, Leader Technologies had a creative "ah hah" moment and sought patent protection since it was still early days for the commercial Internet. Patent law professor James P. Chandler, III was recommended as the legal expert to protect their invention. On the surface Chandler's credentials were stellar. Leader did not know that Chandler was secretly the intellectual property advisor for the British Pilgrims Society and its minions in the U.S. government, notably DARPA, and the chief DoD technology (theft and) weaponization agency named [The Office of Net Assessment](#) who also funded Stefan Halper in the Trump-Russia hoax.

These people created an elaborate, multi-layered scheme to steal Leader's invention. Notably, they used a \$40 million IBM "donation" to form the IBM Eclipse Foundation. Eclipse has become their primary vehicle to rebrand Leader's stolen invention as "open source" and then distribute the invention free of charge, no license, to the entire planet: Silicon Valley, banks, government, propaganda, telecommunications, defense, healthcare, industry, commerce, academia, publishing, entertainment, media all raced to sign up.

Social networking technologies are now infused into the core revenue models for companies including telecom, cloud, health, education, and defense. The market capitalization of these industries alone is about \$20.5 trillion.

The Free Press Fund

Leader Technologies has proposed a solution to this criminality in [The Free Press Fund](#). See Footnote 2.

If America wants to claim that she is a moral arbiter in the world, this theft of social networking must be fixed.

All inventors will benefit by this endemic theft of inventions by government tyrants.
